

Installing software for the Wisdom OS on your PC

Please follow these instructions for installing PC Partner and TrueSync software for use with the following Motorola two-way messaging devices: Timeport P935, Timeport P930, and Pagemaster 2000X. You will need your original Timeport installation CD (the CD with the green wave), a CD drive on your computer (not a network CD drive), and at least 20 Megabytes of free hard disk space. You must also have your pager, the charging base, and a free serial port (9 pin) with its COM port enabled on your computer available.

(Note: This process is the preferred installation method for the following Microsoft Windows operating systems: 95, 98, Millennium, NT, 2000, and XP.)

- 1) Place your original Timeport installation CD in your computer's CD drive, but do not let the CD auto-start.
- 2) You can prevent your CD drive from auto-starting by holding down the left "Shift" key on your keyboard while you insert the CD, for about 10 seconds.
- 3) If your CD drive does auto-start the CD, simply let the installation screen load to the first page (the page that asks you to choose "Install" or "Continue") and then left click the "X" in the upper right-hand corner to close the CD installation process.
- 4) Leave the Timeport installation CD in the CD drive, inactive.
- 5) Please left click on this link: <http://www.motorola.com/MSP/products/wisdom/updates.html>
- 6) Please select the Green Download Arrow for "Windows 2000 and Windows ME support".
- 7) Save the download to your desktop.
- 8) Once the file is downloaded it will be called "win_2000_win_me_setup.exe".
- 9) Open up this file by double-clicking it, and follow the installation options.
