

MOTOROLA TELEVATION™

TV BEYOND THE TV

With exploding demand for tablets and growing interest in video streaming beyond the TV screen, Motorola's Televation is perfectly positioned to help you capitalize on some of the most compelling market trends in recent history. Televation allows consumers to view all of their favorite live TV shows on selected devices anywhere in and around the home.

Extend Your Brand.

Extend the Viewing Experience.

Your customers value the live TV content that they just can't find over-the-top, but more and more of their time is being spent with their tablets. Increase the value of your branded service by letting them now watch all of your live content on their tablet. Televation, when paired with your branded App turns their tablet time into a branded media experience and gives you an additional outlet to reach the consumer.

Easy for the Consumer.

Easy for Your Business.

Motorola Televation is unique in that there are no tuner contention issues. It acts as an independent tuner so, unlike other products on the market, a consumer tuning into content using Televation will not disrupt the viewing of household members watching TV in other rooms. Changing channels on a tablet or mobile device is easy. Televation efficiently tunes all subscribed services and reformats and transcodes the content to MPEG-4. Televation's simple, 'plug-and-play' installation also gives you a variety of cost-effective roll-out options. The device uses a simple, Cable IN and Ethernet connection to the Wi-Fi home router, which is ideal for self-installation. This allows you the flexibility to offer either a professional installation or a home installation package.

Superior Content Security.

Televation uses Motorola's IPRM-HN technology to ensure content security. IPRM-HN, a part of Motorola's SecureMedia® portfolio, has been fully approved by both CableLabs and DTLA for content protection within the home. It was designed with the ability to securely stream stored content from the initial receiving device to other devices that have been authenticated on the consumer's personal IP network. This ensures that premium programming delivered by you to your subscribers remains strictly protected.

Applications that Drive the Experience.

Motorola's Televation Application Protocol Interface (API) supplies a communication layer to Motorola's mobile client Software Development Kit (SDK). This enables device discovery, video streaming, IPRM decryption and User Interfaces for content navigation and playback.

Finally, you can choose to build your subscriber App or Motorola can provide you with a ready-to-brand App created by our team of experts. Televation ensures your brand visibility when your subscribers pick up their tablets.

Specifications

STANDARD INTERFACES

Front Panel

Indicators (Power, DVR Link, US/DS, Record)

Rear Panel

- F-connector for Cable Input
