

# Radio Site Security Service

The Future of Surveillance. Real-Time Video, Sophisticated Analysis

## Radio Site Security

Video is the next step in the evolution of Mission Critical Data. With the Radio Site security solution you can improve daily operations and emergency response. Motorola's Radio Site Security solution allows you to add video to monitor your radio sites more effectively by placing cameras in areas that are difficult or inefficient to patrol. In the event of an emergency, the Radio Site Security solution gives you the ability to analyze and share live video from the incident scene, enabling instantaneous decisions based on video from the site or location. And because it is backed by Motorola, you can rest assured that Radio Site Security will support your public safety agencies for years to come.

### Motorola Services

Motorola is committed to helping organizations operationalize mobility and achieve critical business imperatives through a portfolio of innovative, comprehensive services. Motorola has more than 75 years of radio communications expertise and service offerings in system integration, managed services, security, network optimization and applications to ensure customers achieve optimal performance and an exceptional user experience. The Motorola Services difference: People, Processes and Innovation; More than 6,500 service professionals worldwide; Customers in more than 80 countries across all segments; and more than 900 Local Points of Presence.

### Motorola Radio Site Security

Radio Site Security improves situational awareness by transforming video data in actionable, real-time information you can use to increase the safety of your personnel and the citizens they protect.

#### Key benefits include:

- Use live analytics to trigger notices that may potentially be missed by human eyes
- Use bandwidth management to eliminate any disruptions in voice and data communications
- Improve your situational awareness and enable better decision-making

### From Detection to Decision

With Radio Site Security's Video Content Analytics, multiple video streams can be monitored at once, and when an incident occurs, the software will automatically recognize the event and send an alert to personnel on duty. This real-time data provides pre-emptive intelligence — a critical advantage that can help you stop events before they escalate and use resources more effectively.

### Be Everywhere At Once

Communities are demanding increased officer presence. With Radio Site Security, you can efficiently collect video data and quickly distribute it to the people who need it. When an event takes place, Radio Site Security can record and send the data to where it's needed most.

### Improve Your Emergency Response

When an event occurs, Radio Site Security provides immediate intelligence via video data from cameras around the scene. This data can then be distributed to first responders who are en route, with an available wireless network. You can send video to mobile police, fire, and ambulance units; you can even share it with other government agencies. Personnel can utilize the cameras to assist the first responders and warn of potential threats at the site.

### Manage and Keep the Data You Need

The Radio Site Security solution provides MPEG-4 compression. This enables you to record all your events in higher clarity with less data storage needed. Additionally, the solution utilizes bandwidth management that lowers the required bandwidth when there is no activity. Use the intuitive software to view where events have occurred. This allows you to avoid media management problems that can plague tape-based systems. The video you decide to keep can be stored on local devices or saved to a remote device that is connected to your network.

### Flexible and Scalable

Radio Site Security is a modular solution that can be scaled up or down to fit every customer's needs. If you have never used video before, Radio Site Security can be installed quickly and efficiently in a custom configuration. If you have existing video surveillance systems, you can gradually incorporate Radio Site Security solution components as time and budget allow. Because the Radio Site Security solution works with existing networks as well as newer wireless networks, you can leverage infrastructure that is already in place.

### Why Motorola?

Motorola can be trusted to deliver and support mission and business critical systems with over 75 years of understanding the needs of government agencies. We understand what Mission Critical is all about: ensuring the safety of your employees and the citizens they protect.
