

Radio Site Security Service

Executive Summary

Radio Site Security is a real-time video over IP that enables you to monitor your sites utilizing advanced analytics that can detect various anomalies based on criteria set by you. It allows you to effectively record and review your video and add analytics to better enhance your ability to monitor events effectively. Radio Site Security will enable you to protect your sites and prevent any disruptions in operations that may be caused by any illegal activity.

Radio Site Security will:

- Ensure safety and well being of First Responders and Citizens
- Reduce costs by reducing the chances of theft at sites
- Prevent disruptions in mission critical voice communications
- Provide transmission of video through existing backhaul with advanced bandwidth management to keep your essential data and voice needs intact
- Review and analyze video with various analytics
- Provide you with the ability to deliver rapid response

The Motorola difference

Bandwidth management allows you to keep your voice and data channels working at peak efficiency without disruptions in quality and enables multiple users to view video without sacrificing speed and quality. Motorola's Radio Site Security solution offers high quality video requiring less storage so you can record longer sessions without fear of missing anything. During playback of recorded video, the unique analytics and software setup enables you to quickly find what you're looking for, thus saving you time and money in resolving the situation. Motorola's expertise in radio space enables us to provide you with the best solution to fit your needs in a cost effective package.

Utilize this service when sending a technician to a site for repairs. Pair this service up with Network Monitoring or other Motorola dispatch related services and be able to assist the technician from a remote location, and also ensure their safety.
