## BizTalk RFID Mobile Available for Motorola RFID Handhelds

Motorola is proud to announce the availability of Microsoft's [BizTalk RFID Mobile](#) for use with the Motorola [MC9090-G RFID](#) Handheld Readers, further defining our long-standing strategic relationship with Microsoft. BizTalk RFID Mobile is a light-weight platform of mission-critical tools that enable customers to develop mobile RFID applications that easily integrate with their existing systems.

BizTalk RFID Mobile simplifies device management and deployment of mobile applications to facilitate real-time decision making using the data collected with Motorola's RFID handheld readers. This mobile platform provides a strong, scalable architecture for small and medium size businesses, including closed-loop retailers, to adopt RFID and realize the benefits in the shortest time possible.

The BizTalk RFID Mobile platform enhances the capabilities of Microsoft's currently available [BizTalk Server 2006 R2](#), their core service-oriented architecture (SOA) and business process management (BPM) technology, which has been available for use with Motorola's [XR Series Fixed RFID Readers](#) since its introduction. BizTalk Server 2006 R2 includes advancements in device management, data filtering and business rules, electronic data interchange (EDI), and interoperability with line-of-business adapters for a wide variety of industries.

Motorola's BizTalk RFID Mobile provider for the MC9090-G RFID Handheld Reader is available as a [free download](#) from Motorola.

For additional information about how Microsoft's BizTalk RFID Mobile platform can help you develop mobile applications for Motorola's RFID Handheld Readers, visit the [BizTalk RFID Mobile](#) webpage.

"BizTalk RFID Mobile represents an exciting opportunity for Motorola to build on our track record of delivering innovative products to meet customer needs."

Joe White, vice president of RFID business development for Motorola
