The Motorola Mobility Suite:

End-to-end centralized enhancement and control of your enterprise mobility solutions unlocks extraordinary value

Motorola's Mobility Suite is a robust set of software products that address the most significant and costly challenges associated with enterprise mobility solutions — deployment, optimization, management, and protection throughout the lifecycle of the entire mobility solution. These robust modular software products provide your organization with the planning and day-to-day management tools needed to maximize the performance of your Motorola mobility solution, providing centralized control of your mobile devices, the applications resident on those devices, as well as your wireless LAN switches, access ports and access points. Unique to Motorola, the Mobility Suite allows you to:

- **Plan:** Design your wireless LAN from the ground up for maximum performance
- **Implement:** Easily develop and implement business productivity applications
- **Secure:** Deploy and manage security policies to protect your network and devices from hackers and attacks
- **Manage:** Quickly identify and resolve network and end-user mobile device issues

This highly scalable solution is designed for virtually any size enterprise, able to meet your needs today and tomorrow through the easy integration of new devices, applications and networks.

The Motorola Mobility Suite simplifies the complexities of mobility, effectively maximizing uptime while reducing the time and cost associated with planning, implementing, securing and managing Motorola mobility solutions. The result is a new level of productivity for IT staff and mobile workers, reduced operational expenditures and a faster return on investment.

Maximize the success of your mobility solution — with the Motorola Mobility Suite.

Mobility Services Platform

Robust management of mobile computers

Simplify and reduce the cost of managing your entire enterprise mobility solution with anywhere, anytime end-to-end visibility and control of all your mobile devices — as well as the mobile applications and data resident on those devices. This solution is ideal for any size environment — from a single corporate office to many locations around the world, and from hundreds to thousands of handheld computers, bar code scanners and more. A comprehensive feature set includes remote staging of devices for true out-of-the-box operation; remote provisioning for updating devices with the latest operating system, firmware, applications and software updates; and remote device management for rapid troubleshooting and resolution of end-user issues.

RF Management Suite

WLAN infrastructure planning and management

This powerful set of integrated applications enables network administrators to easily design, troubleshoot, secure and manage wireless LAN (WLAN) networks. Planning and site survey tools enable the deployment of a robust network that delivers the performance you need today, with the scalability and extensibility to meet future requirements. Security tools enable you to protect your network against unauthorized access and malicious attacks and easily meet enterprise and regulatory requirements for securing personal and financial data. In addition, network monitoring and analysis tools provide the information required to easily identify, troubleshoot and resolve network issues.

Mobile Security Suite

Security for Motorola mobile devices

Motorola Security Suite provides a layered security solution that protects the data resident on your mobile devices — as well as the data in transit to and from your mobile devices. This enterprise grade security solution is designed specifically for mobile computers and smart phones, offering robust functionality that includes a firewall, intrusion prevention, enforced authentication, data encryption, integrity monitoring, and enterprise management features. In the event of loss or theft, devices can be wiped clean. Device-level intrusion protection includes the ability to monitor and record device security events — such as invalid login attempts and password resets. Multiple Mobile Virtual Private Network (VPN) solutions offer secure data communications, enabling mobile computers, laptops and select peripherals to safely access email, instant messaging services, business applications and corporate data. And Mobile VPN session persistence improves the mobile experience and keeps workers productive by eliminating the need to logon or restart applications after device hibernation, sleep mode or loss of coverage.

The Motorola Mobility Suite delivers an unprecedented level of control over every aspect of your mobility solutions...from the wireless LAN infrastructure to application access and design as well as the data, applications and feature access on your mobile devices.

Mobile Application Utilities

Application enhancements for increased mobile device value

Motorola's Mobile Application Utilities provide a variety of functions to help enterprises maximize the value of Motorola devices. Protect worker productivity with **AppCenter**, which allows you to control the software applications and device features mobile workers can access. Substantially reduce application development costs with **PocketBrowser**, which enables the rapid development of robust mobile web-based applications that incorporate advanced data capture functionality such as bar code scanning, RFID, signature capture and more. And mobile users can access mainframe legacy applications right out of the box with **Terminal Emulation (TE)**.

Motorola — your end-to-end enterprise mobility provider

When you choose Motorola, you have access to the expertise you need to get the most out of your enterprise mobility solution. Our end-to-end Enterprise Mobility Services offer proven processes as well as the technology and industry expertise you need to achieve the highest levels of functionality and support throughout the entire solution lifecycle — from initial planning, assessment, design and deployment to ongoing service and support. Motorola's Advanced Services helps to minimize potential integration issues and reduce implementation time.

- Motorola's Advanced Services help to minimize potential integration issues and reduce implementation time.
- Tiered Commissioning Services incorporate server configuration, training, testing and a rapid deployment process into a single streamlined program, so you simply select the level that best meets your requirements.
- After deployment, seamless integration with Motorola's Customer Services helps ensure that all elements of the solution continue to work at peak performance levels.
- Software Support solutions help keep your critical business applications fully maintained and up to date with the latest features and functionality.

To find out more about how the Motorola Mobility Suite can maximize the success of your mobility solution, please visit us on the web at www.motorola.com/mobilitysuite or access our global directory at www.motorola.com/enterprise/contactus

Motorola Mobility Suite

at-a-Glance

Mobility Services Platform

End-to-end management of mobile computers

MSP Stage

Centralized and remote staging of mobile computers

MSP Provision

Centralized and remote provisioning of mobile computers, including updates to firmware and applications

MSP Control

Centralized monitoring of mobile devices, providing the information and tools required to easily troubleshoot and resolve issues remotely

RF Management Suite

WLAN infrastructure planning and management

LANPlanner

Site-specific modeling that enables the creation of a comprehensive intelligent network plan — including an equipment list and ideal placement to achieve required performance levels

SiteScanner

Provides tools to quickly and easily perform a site survey and record live network data to validate that your network is meeting pre-set performance levels

RF Management Software (RFMS)

Tools to easily monitor and analyze your wireless LAN, enabling the immediate discovery, troubleshooting and correction of issues as they occur

Wireless Intrusion Protection System (WIPS)

Actively safeguards the WLAN against intruders and attacks and ensures corporate security standards through policy-based administration

Mobile Security Suite

Security for Motorola mobile devices

Mobility Security Platform

Protects information resident on mobile devices through encryption of data, device-level intrusion protection, remote device wipe and more

IPSec Mobile VPN

Provides secure access to corporate data over a WLAN and WWAN by authenticating and/or encrypting each data packet

SSL Mobile VPN — AirBEAM Safe

Provides secure access to corporate data over a WLAN and WWAN complete with session resume and transaction recovery to keep workers productive — even if coverage is lost

Multi-Net Mobility

Provides laptop users with secure networking (VPN) capability, session persistence despite network drops and the ability to roam between multiple networks

Mobile Application Utilities

Application enhancements for increased mobile device value

AppCenter

Enables enterprise to define which applications and which device functions are accessible for specific users

Terminal Emulation

Enables out-of-the box access to legacy mainframe applications

PocketBrowser

Enables rapid and cost-effective development of complex browser-based mobile applications that include bar code scanning, RFID, signature capture and more
