

Motorola Radio Asset Management

Tracking radio communications assets is a daunting task. Equipment is distributed to hundreds of individuals. Radios are shared by many resources or re-allocated between agencies. If equipment needs to be brought in for repairs or replacement, you need to know all of the relevant information associated with the radio — its history, the warranty date, software version, to whom it has been assigned, repair record, etc. — to make the most cost-effective decisions.

For improved lifecycle of your radio equipment, it just makes sense to have a comprehensive solution for the maintenance and management of your communications assets. Ideally, your tracking application should include:

- A centralized, web-based tracking database to manage all of your issued equipment and parts
- An easy-to-use work ticket creation process for issuing and scheduling repair activities
- A method of tracking of assets and parts inventory, including notifications of low inventory levels
- A built-in dashboard application that allows you to quickly view radio performance metrics
- Standard and custom reporting capabilities to report on maintenance history and costs

At Motorola®, we understand the challenges you face. We know that having the right equipment in the hands of users at the right time is vital to running a smooth operation. That's why we have developed a

radio asset management solution that will help you close the gap in your maintenance cycles and streamline your communications asset management process.

Helping You Track and Manage Radio Equipment Seamlessly

The Motorola® Radio Asset Management Solution is a commercial off-the-shelf (COTS), web-based solution that centralizes asset-tracking and manages workflow, inventory, and reporting processes involved with maintenance activities.

Accessed via a web browser, the system is easily deployed throughout your organization. The centralized tracking database provides up-to-date asset information. Searching and reporting capabilities are quick and easy. The system also streamlines the repair and maintenance process to improve operational response. By centralizing radio equipment data and maintenance management, you have the tools to maximize the lifecycle of your radio assets.

Features and Benefits of the Motorola Radio Asset Management Solution

The Motorola® Radio Asset Management Solution provides a wide array of benefits for your organization.

<i>Features:</i>	<i>Benefits</i>
<ul style="list-style-type: none"> • Robust tracking capabilities 	<ul style="list-style-type: none"> • Provides a centralized database to store all communications inventory • Tracks asset attribute information such as location, assignment, warranty information, cost, etc. • Enables quick and efficient searching and reporting capabilities • Provides easy-to-use work ticket creation process as well as maintenance history and costs • Offers a built-in spare parts tool to track inventory and material usage
<ul style="list-style-type: none"> • Easy-to-use interface 	<ul style="list-style-type: none"> • Increases overall efficiency of radio maintenance processes • Enables user to quickly search and find asset information
<ul style="list-style-type: none"> • Web-based solution 	<ul style="list-style-type: none"> • Only a browser is needed to access the system • Intranet capable, available to remote users
<ul style="list-style-type: none"> • Bar coding capabilities 	<ul style="list-style-type: none"> • Simplifies the tracking of assets and parts inventory
<ul style="list-style-type: none"> • Dashboard capabilities 	<ul style="list-style-type: none"> • Provides ability to generate a quick assessment of radio management performance metrics
<ul style="list-style-type: none"> • Preventive maintenance (PM) flexibility 	<ul style="list-style-type: none"> • Provides flexibility of tasks based on a fixed date, flexible time period or metered usage • Allows for automatic work ticket creation
<ul style="list-style-type: none"> • Enterprise access management tool 	<ul style="list-style-type: none"> • Allows you to proactively manage assets, information, and maintenance activities • Helps improve operations and performance • Flexible configuration to fit for your needs • Expandable beyond radio maintenance
<ul style="list-style-type: none"> • Geographical information system (GIS) mapping software module 	<ul style="list-style-type: none"> • Allows the ability to spatially locate assets and conduct maintenance

Streamline Your Operations and Asset Management Processes:

At Motorola®, we offer the experience, expertise, quality, and implementation capabilities you have come to expect to support your mission critical communications.

The Motorola Radio Asset Management Solution helps you proactively manage your communications infrastructure and devices, analyze information associated with these assets and schedule preventive and reactive maintenance activities in an efficient and cost effective manner. Our solution is one of the

most highly deployed web-architectural asset management systems in the world, and expands as needed to other infrastructure assets you may be managing, maximizing the value of your investment in an asset management solution.

Whether you are self-maintained or coordinating outsourced maintenance activities, the Motorola Radio Asset Management Solution provides everything you need to effectively manage and track your radio equipment optimizing the lifecycle of these essential communications tools.
