

Fact Sheet

PREMIER MDC™ REPORTING SOFTWARE

WIRELESS REPORTING STREAMLINES REPORT CREATION AND APPROVAL PROCESS

A wireless reporting solution that improves report accuracy, saves time and provides quick access to critical data allowing public safety personnel to remain in the field.

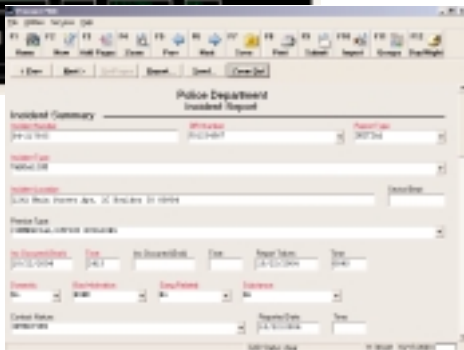

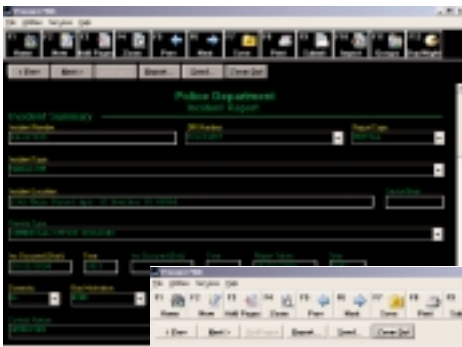

COMPREHENSIVE REPORTING

As an extension of Premier MDC™, Premier MDC Reporting provides a comprehensive solution to the growing need for quick and accurate reporting in a mobile environment. Errors commonly found in handwritten reports can be significantly reduced by directly importing information from many data sources including dispatch, state, records management systems and scanned barcode information. Once completed, users can quickly share report details through wireless transmission to headquarters for routing approval, notification, and importing into a Records Management System (RMS). This can significantly reduce the need for users to return to

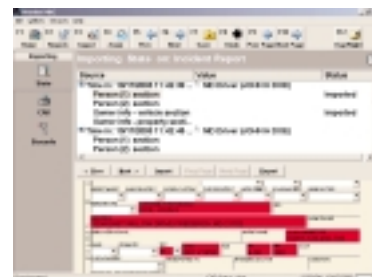

headquarters to perform reporting tasks and provides an overall time savings to public safety agencies.

IMPROVES REPORT ACCURACY

Premier MDC Reporting eliminates retyping by directly importing dispatch, state, RMS, or barcode data. Agencies can utilize drop-down lists, validations, linking of common data within report fields, and spell check to help verify that complete and accurate reports are submitted.

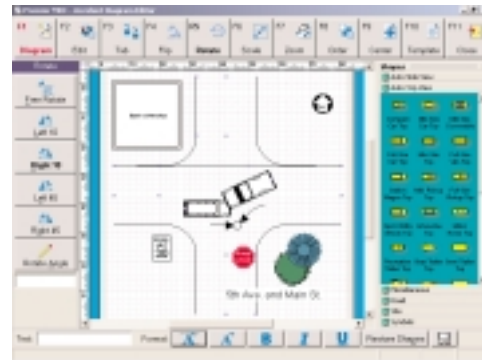

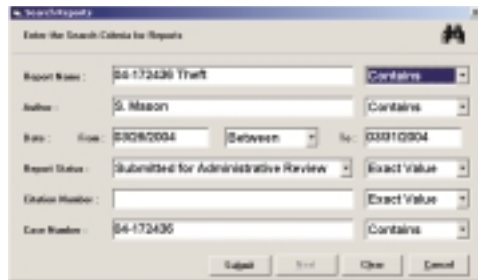

Premier MDC Reporting makes report preparation simple and precise. Users can utilize dropdown selection lists and perform validation prior to submission. Reports can be created in night mode for easier viewing and added officer safety.

Directly import data from dispatch, parsed state responses, RMS or barcode device. Report fields can also be automatically populated based on a user's information, such as local agency, user name, ID and current date.

Designated users can easily search for reports through numerous search criteria to obtain access to report data.

ELECTRONIC CITATION AND SUMMONS

By administering state issued electronic citation and summons numbers with Premier MDC Reporting, state specific citations and summons reports can be completed more efficiently in the vehicle and issued on-scene. Numbers are directly inserted into a citation or summons report from the server, eliminating the need for manual entry. Administrators are equipped with detailed reporting tools that enable search and analysis of outstanding citation or summons reports.

ACCIDENT DIAGRAMMING

Premier MDC Reporting is available with an optional Accident Diagramming module that allows users to depict diagrams of accident scenes replacing often hard-to-read handwritten reports. Using a Microsoft Visio®-based diagramming program, users can access existing templates to accurately and easily complete diagrams of common accident scenes or create custom scene locations. Users drag and drop shapes from stencil libraries to create diagrams. Many of these shapes are interactive, allowing users to resize, rotate, and perform other actions with them. Diagram data is made part of the field report, and is transmitted in a manner that enables another user, such as a supervisor authorized to edit the report, to make corrections. The compression process enables users to wirelessly transmit diagrams at approximately one percent of original size, allowing for efficient transmission of accident diagrams.

APPROVE REPORTS WIRELESSLY WITH OVER THE AIR CUSTOMIZED WORKFLOWS

Reports are quickly sent through wireless transmissions directly from a vehicle or desktop workstation. Supervisors are notified when reports are available for review enabling prompt approval. In the absence of an individual supervisor, users can submit reports to a group of supervisors, to accommodate assigned shifts, locations or departments, enabling faster response times.

RAPID ACCESS TO REPORT DETAILS

Data is available for export into a Records Management System, which minimizes manual data entry for an agency's records department and allows for immediate data sharing and analysis. Premier MDC Reporting provides a comprehensive interface to the Motorola Infotrak™ Law Records Management System (LRMS). This interface allows authorized users to perform detailed queries to access information from the LRMS for direct import into field reports. In addition, Infotrak provides a master name resolution eliminating duplicate data and matching new information with previous entries.

Premier MDC Reporting equips public safety agencies with an effective and secure method for collecting report data in a mobile environment. By automating data collection and providing efficient, wireless workflow, users, supervisors and administrators experience valuable timesavings. Agencies benefit from a simplified reporting process and enhanced productivity.

Fire and EMS personnel can easily complete reports using Premier MDC Reporting.
