

What is the Value in Training?

A highly trained and knowledgeable workforce can increase quality and efficiency, thereby improving Return on Investment (ROI).

Product Documentation

Motorola's Network Support program is available for you to choose customized services and support solutions to satisfy your specific business requirements. In order to access these services you must obtain an account via:

<https://mynetworksupport.motorola.com>

You will be able to access bulletins, product manuals, training catalogs, technical support, hardware support, order management, and software tools/downloads.

Your Trusted Information Partner

The MTIPS organization provides feature and product platform training and documentation for wireless networks in the following 3G technologies: CDMA, GSM/UMTS, iDEN, CORE (PoC, Messaging), WiMAX, and LTE.

We're proud to provide wireless networks training and documentation to our network operators and cellular carriers, as you invest in new platforms, features, applications, and services to meet the needs of customers. Our information will prepare you to develop in-depth technical expertise and highly specialized skill sets needed to operate and maintain your network and stay ahead of the competition.

Training in today's economic climate

In today's economy, everyone is asked to do more with less. Training budgets are being reduced, resources are scarce and you're probably asking yourself how can I keep my skills sharp and develop new ones in this challenging environment?

A variety of learning mediums can provide training opportunities when time and money are short.

Information tools such as remote labs, instructor blogs, podcasts, webinars, online study groups, and white papers about wireless and IP curriculum will become available in 2010 to help keep you informed.

The flexibility that these methods allow you to get the right information, when you need it.

For more information visit our <http://www.motorola.com/training>

Enrolling in our courses is easy. Visit the <https://techtrain.motorola.com> for course descriptions and then contact your local training coordinator for suitcase training and enrollment approval.

What is LTE?

LTE is a new wireless technology standard that can offer the data speeds on-the-go that are needed for true media mobility.

With LTE you can:

- Continue to watch the latest Video TV series recorded on your DVR on your mobile phone, automatically transferred as you walk out the door
- Upload video content onto your social networking profile to let your friends know what you are up to
- The PowerPoint file you just saved on your laptop instantaneously becomes available on your smartphone

Upcoming Courses

Nov 03 - LTE100	Introduction to LTE
Nov 09 - MAX300	WiMAX Radio Link
Nov 16 - LTE300	LTE Radio Link
Dec 02 - MAX202	WiMAX DAP Commissioning & Maintenance
Dec 07 - MAX204	WiMAX Network Operations & Maintenance
Dec 08 - LTE100	Introduction to LTE
Dec 14 - MAX300	WiMAX Radio Link

Focus on Training — Elearning Libraries

New Web-Based Courses Available for Wireless Networks

Motorola has just released four new self-paced courses to help you understand the latest features for CDMA R23, EVDO R10, MMSC, SMSC Messaging, and LTE Products.

NEW

The first elearning course, R10 System Release Delta (GNL310) is intended for engineers migrating from EVDO R9 to the EVDO R10 Release.

The second elearning course, R23 System Release Delta (GNL023) is intended for engineers migrating from CDMA R22 to the CDMA R23 Release.

The third elearning course, SMSC System Impact Delta (GNL421) is intended

for engineers migrating from SMSC R20.1 to the **SMSC R21** Release.

Finally, MMSC System Impact Delta (GNL422) is intended for engineers migrating from MMSC R21 to the **MMSC R22** Release.

LTE: Long Term Evolution

Need an Introduction to LTE? Enroll in (LTE102). This elearning introduces learners to Motorola's LTE course. The course is divided into multiple lessons, each focusing on a specific topic, with the goal of introducing learners to LTE standards, protocols, call processing, and Motorola's GSM and CDMA migration solution.
